Revision History

Name	Date	Reason For Changes	Version
VERSION 1.0	03/09/2026	NILL	
VERSION 2.0	10/09/2026	Incomplete and improved some Requirements	

1. Introduction

1. Purpose

The system will help manage hotel rooms, customers, bookings, payments, staff, services, and other hotel activities through an online platform.

1. Document Conventions

This document uses a structured format to describe the requirements of the Hotel Management System. Functional requirements describe what the system should do, while non-functional requirements describe how well the system should perform.

1. Intended Audience and Reading Suggestions

This document is intended for hotel customers, hotel staff, managers, administrators, developers, and testers. It gives an overview of the system and explains its functional and non-functional requirements..

1. Product Scope

The Online Hotel Management System will allow customers to:
Register and log in to the system.
View available rooms.
Check room details and prices.
Book rooms online.
View and cancel bookings.
Make payments online.
View hotel services.
Receive booking and hotel notifications.

1. References

The SRS follows the structure and organization of the reference SRS document provided for the laboratory work.

1. Overall Description

1. Product Perspective

The system will be a web-based application connected to a centralized database. Customers, hotel staff, and administrators will access the system through their respective interfaces

1. Product Functions

The main functions of the system are:
Customer registration and login.
Customer profile management.
Room management.
Room availability checking.
Online room booking.
Booking management.
Payment management.
Hotel service management.
Notification management.
Report generation

1. User Classes and Characteristics

Customers:
Customers can register, log in, view available rooms, make bookings, make payments, and check their booking details.
Hotel Staff:
Staff members can manage bookings, update room status, view customer information, and manage hotel services.
Administrators:
Administrators can manage customers, staff, rooms, bookings, payments, services, and system records.

1. Operating Environment

The system will operate on modern web browsers such as Chrome, Firefox, Edge, and Safari. It will support Windows, Linux, macOS, Android, and iOS devices. A relational database such as MySQL or PostgreSQL may be used.

1. Design and Implementation Constraints

The system requires user authentication and a reliable internet connection. Access to student, faculty, and administrative information shall be restricted according to user roles. Regular database backups should be maintained.

1. User Documentation

Customers, hotel members, and administrators will access the system through role-based dashboards. Basic instructions will be provided for login, viewing information, updating records, and performing authorized operations.

1. Assumptions and Dependencies

Users are assumed to have valid credentials and compatible devices. The system depends on the availability of the server, database, and network connection.

1. External Interface Requirements

1. User Interfaces

The system shall provide:
Login and registration pages.
Customer dashboard.
Staff dashboard.
Administrator dashboard.
Room details and availability pages.
Booking page.
Payment page.
Customer profile page.
Hotel services page.
Notification page.
Report page.

1. Hardware Interfaces

The system can be accessed using computers, laptops, tablets, and smartphones with internet connectivity

1. Software Interfaces

The system will use a web browser and a relational database such as MySQL or PostgreSQL for storing college information.

1. Communications Interfaces

The system shall use secure HTTPS communication. Email or notification services may be used for sending important academic and administrative notifications.

1. System Features

The following are the system functional requirements:

4.1 Customer Registration

The system shall allow customers to register by providing details such as name,

phone number, email address, and password.

4.2 User Login

The system shall allow customers, hotel staff, and administrators to log in using their authorized credentials.

4.3 Customer Profile

The system shall allow customers to view and update their personal information. Authorized staff or administrators can manage customer records when required.

4.4 Room Management

The system shall allow administrators to add, update, delete, and view room information. Room details may include room number, room type, price, facilities, and availability.

4.5 Room Availability

The system shall allow customers to check available rooms based on their check-in date, check-out date, and room type.

4.6 Online Room Booking

The system shall allow customers to select an available room and make a booking online. The system shall store booking details such as customer name, room number, check-in date, check-out date, and booking status.

4.7 Booking Management

Hotel staff and administrators shall be able to view, confirm, update, and cancel bookings. Customers shall be able to view their booking details and cancel their bookings according to hotel rules.

4.8 Payment Management

The system shall maintain payment details for room bookings. Customers shall be able to make payments online using the available payment methods. The system shall also show the payment status.

4.9 Hotel Services

The system shall provide information about hotel services such as room service, restaurant, laundry, housekeeping, and other available facilities.

4.10 Notifications

The system shall provide notifications for booking confirmation, booking cancellation, payment confirmation, check-in and check-out information, and other

important hotel announcements.

1. Other Nonfunctional Requirements

5.1 Performance Requirements

The system should respond quickly to normal user requests and support multiple users simultaneously.

5.2 Usability

The system shall provide a simple, clear, and user-friendly interface that requires minimal training.

5.3 Security Requirements

User passwords shall be securely stored. Only authorized users shall be allowed to access protected student, faculty, and administrative information.

5.4 Availability

The system should be available throughout the day except during scheduled maintenance.

5.5 Reliability

The system shall maintain accurate and consistent student, faculty, attendance, examination, and fee records.

5.6 Scalability

The system should support an increasing number of students, faculty members, courses, and records without major performance problems.

1. Other Requirements

6.1 User Interface

The system shall provide login, registration, dashboard, profile, room, booking, payment, hotel service, notification, and report pages.

6.2 Database Interface

The database shall store customer, staff, room, booking, payment, hotel service, and notification information.
